

Example website layout on different screen sizes - header and footer

Wide desktop

Narrow desktop / landscape tablet

Portrait tablet

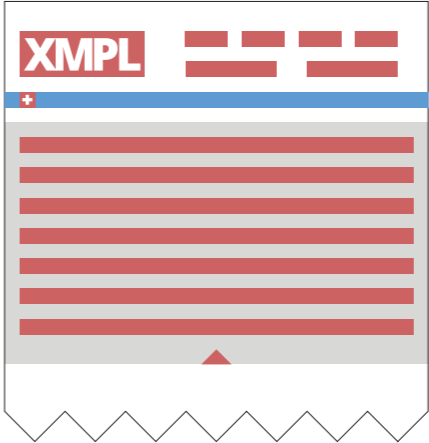

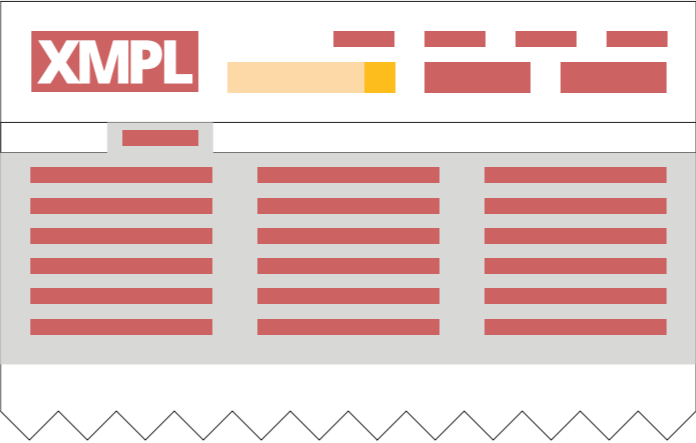

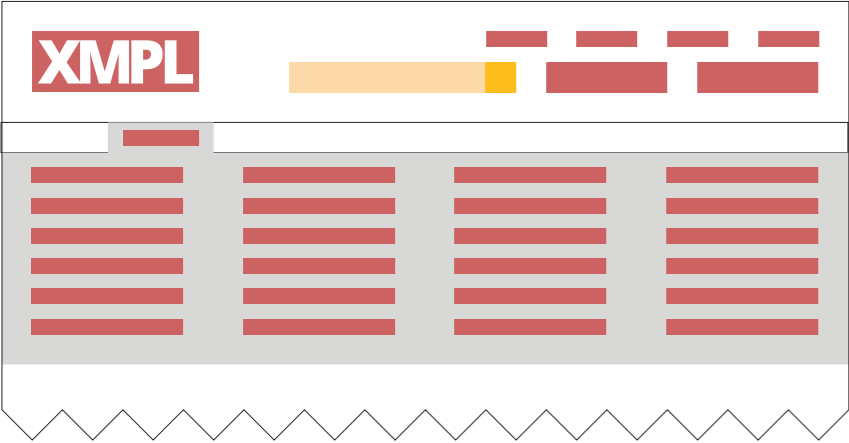

Notes

In tablet view, the newsletter sign-up box should be hidden by default, but revealed automatically if the header link is tapped.

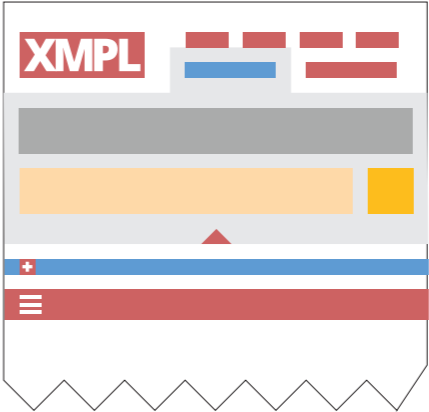

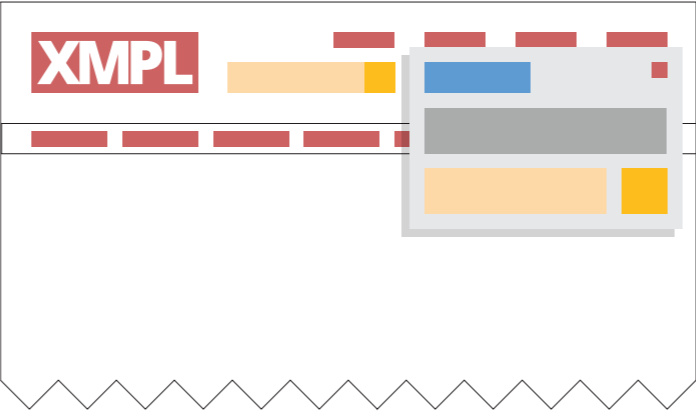

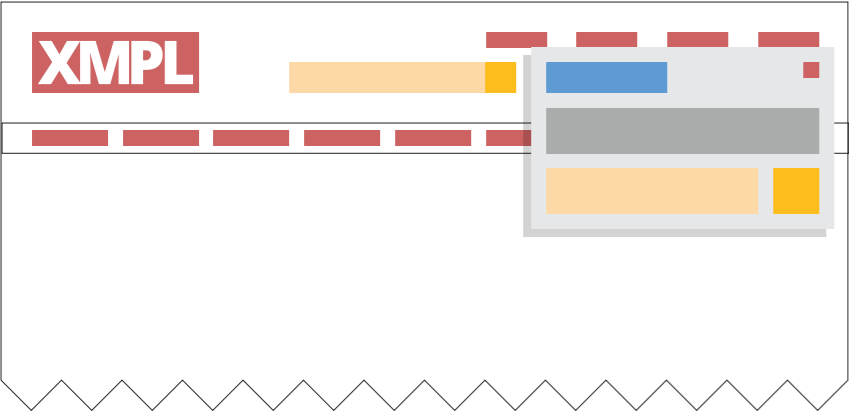

The two lists of links should initially sit under one another as the screen narrows from desktop to tablet view, before being hidden under their respective titles.

- Standard header / footer
- Title
- Link / clickable object
- Image
- Text / body content
- Form element
- Button
- Crumbtrail

Example website layout on different screen sizes - megamenu & CTA dropdowns

Notes
In tablet view, the megamenu would be too cumbersome to use, so the main menu becomes single-level.

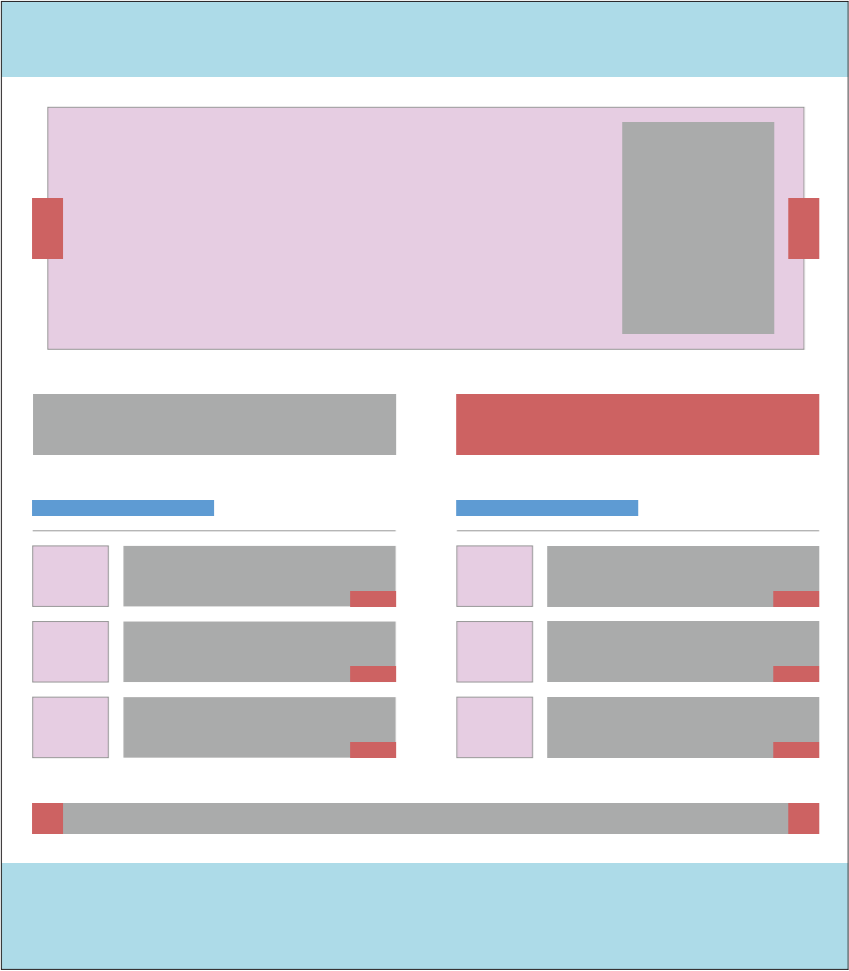

Wide desktop

Narrow desktop / landscape tablet

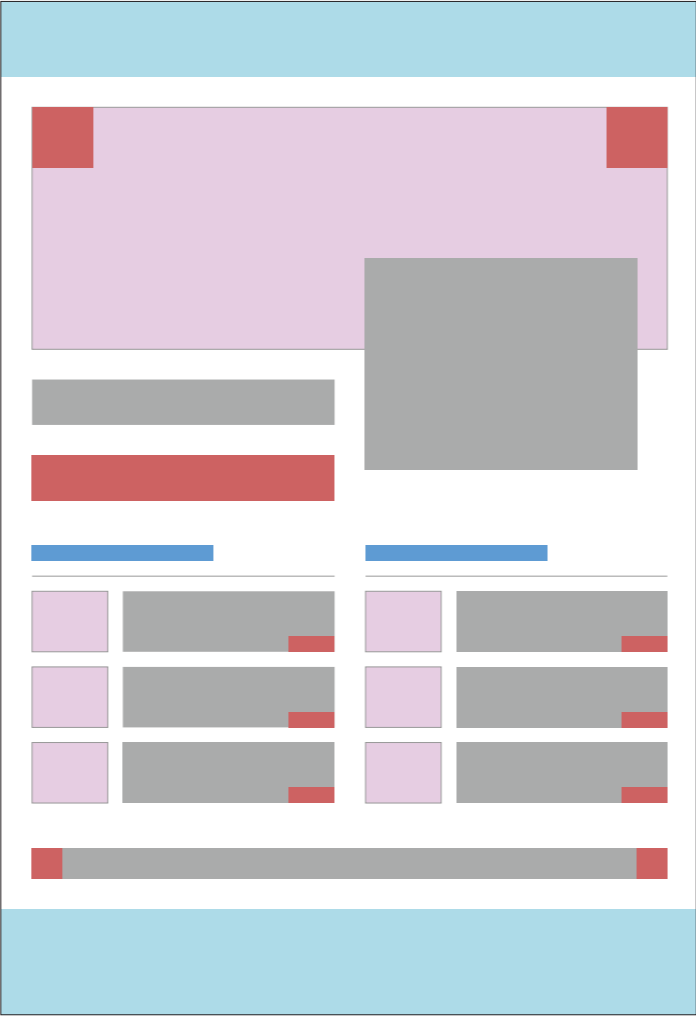

Portrait tablet

- Standard header / footer
- Title
- Link / clickable object
- Image
- Text / body content
- Form element
- Button
- Crumbtrail

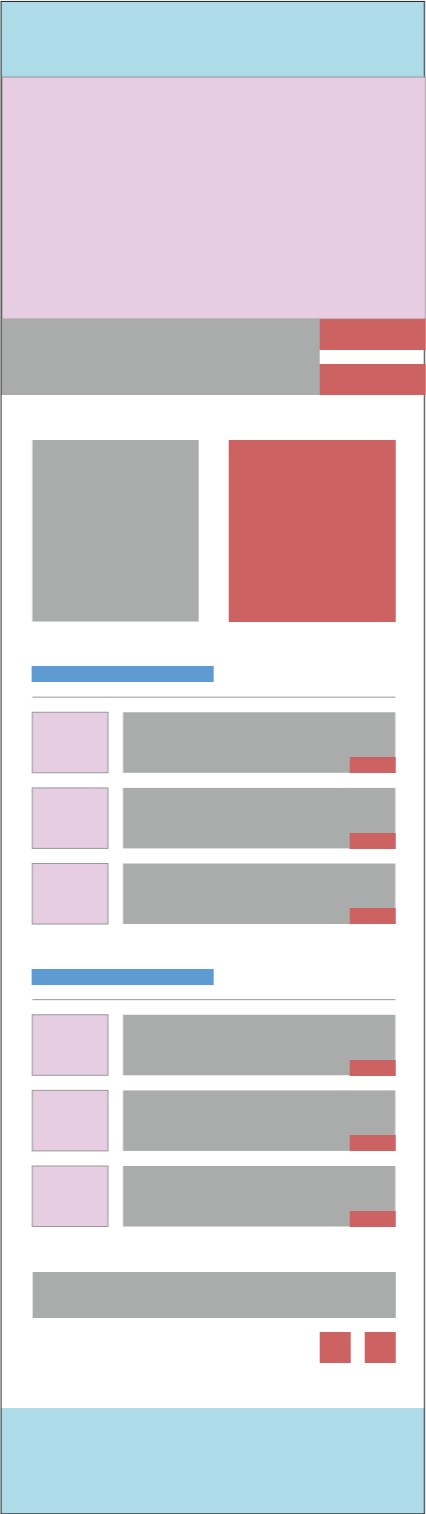

Example website layout on different screen sizes - homepage

Wide desktop

Narrow desktop / landscape tablet

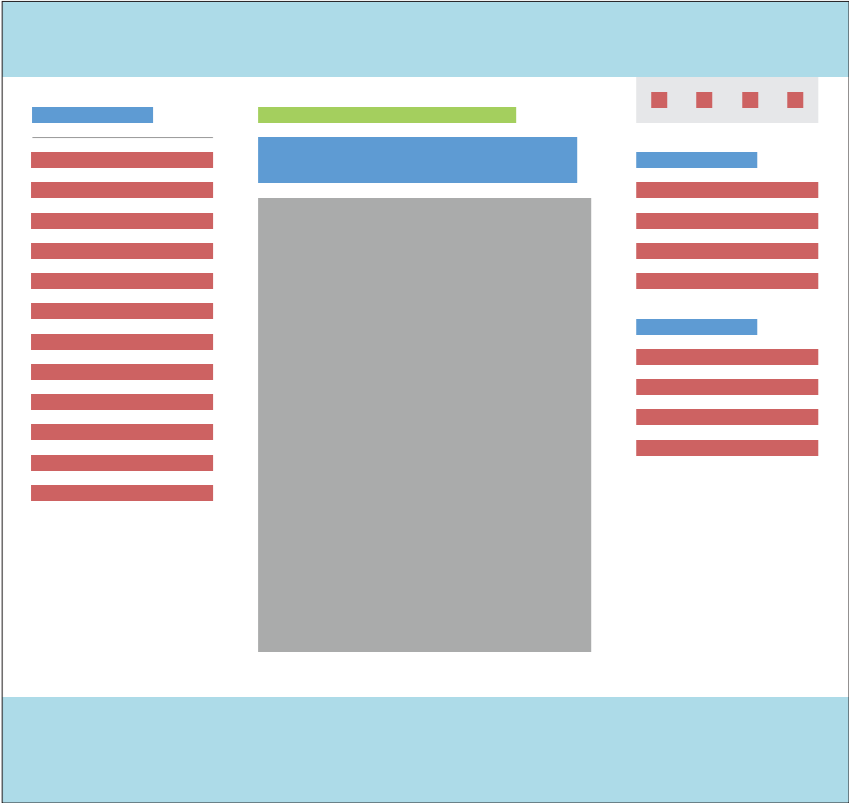

Portrait tablet

- Standard header / footer
- Title
- Link / clickable object
- Image
- Text / body content
- Form element
- Button
- Crumbtrail

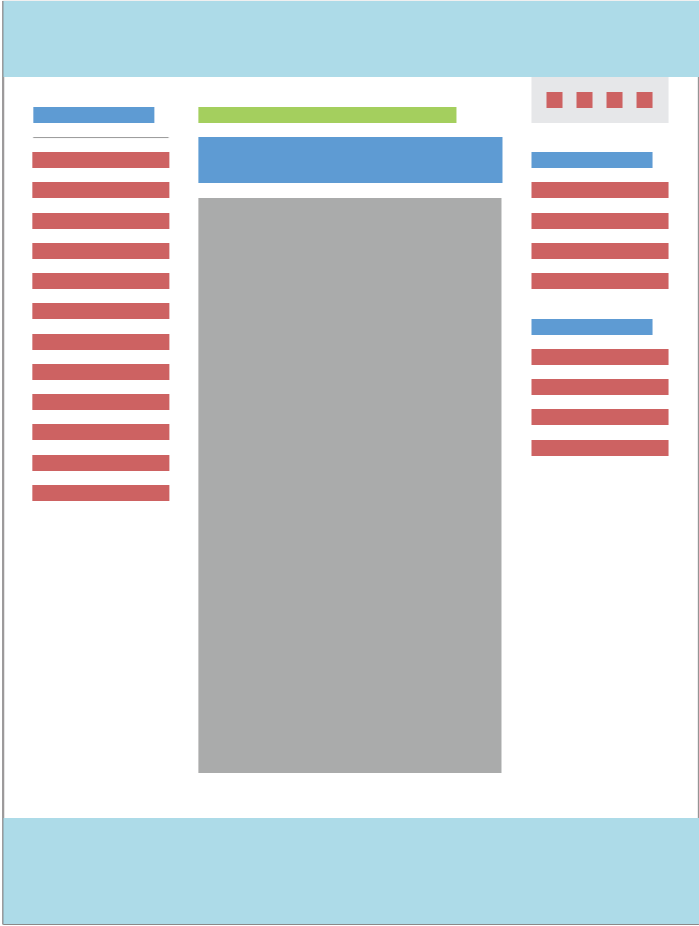

Notes

The guanaco lives in herds made up of male, a few females, and young calves.
 If danger is on the way then the male Guanaco will warn the herd with a kind of bleating noise, and the entire herd will flee.

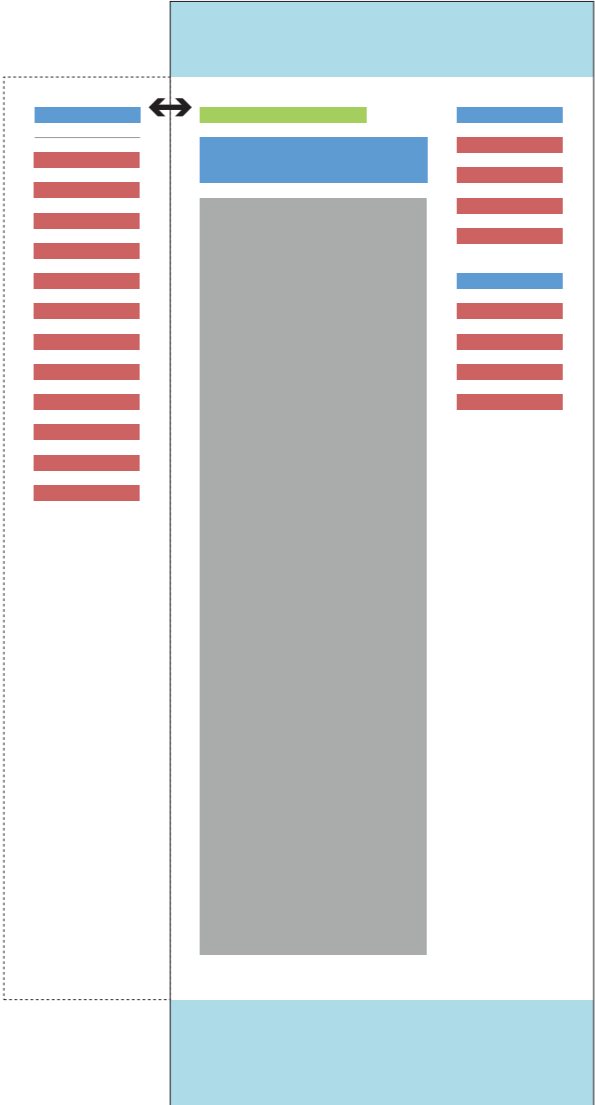

Example website layout on different screen sizes - content pages

Wide desktop

Narrow desktop / landscape tablet

Portrait tablet

Notes

At portrait tablet size the page tool icons (at the top of the right hand column) can be hidden as they would be considerably less useful on a tablet. Additionally, the left hand menu is no longer visible by default, instead sliding in from the left with a swipe or button press.

- Standard header / footer
- Title
- Link / clickable object
- Image
- Text / body content
- Form element
- Button
- Crumbtrail
